

jQuery Plugin Development: Getting Started

Zach Watkins

Who?

- > 6yrs xp, mostly JavaScript
- Implemented / troubleshoot 3rd party plugins
- Read lots of API docs
- Developed many JS plugins (incl. jQuery)
 - modal window
 - content sliders
 - form data autofill
 - countdown
 - google maps
 - data templating
 - search boxes
 - JSON API handling

Overview

1. Basic jQuery plugin structure
2. User Extensions
3. Documentation
4. Github Repository
5. Publish to NPM

onward!

Basic jQuery Plugin Structure

1. Isolate your functionality
2. Wrap in plugin structure that allows chaining

```
; ( function( $ ) {
    $.fn.yourname = function() {
        return this.each( function() {} );
    };
} )( jQuery );
```

User Extensions

aka “Advanced Functionality”

- **Settings**
 - `$(“body”).gumboot({separator: “-”});`
- **Default Settings**
 - `jQuery.fn.gumboot.defaults = {};`
- **Methods**
 - `jQuery.fn.gumboot.stylize = function(){};`
- **Callback**

Documentation

1. Describe the plugin's purpose
2. Each setting name, object type(s), description(s)
 - a. **settingname** (default: "")
Type: String or Array of Strings
A string or array of strings that the plugin uses to ...
3. Example user-defined defaults or methods
4. Use cases with plugin declarations

Github Repository

(if desired)

1. Create account / log in
2. New repository
3. README.md
4. Use repository link for package.json

Repository name

Gumboot

Great repository names are short and memorable. Need inspiration? How about [finna-be-octo-shame](#).

Description (optional)

jQuery plugin that extracts key:value pairs from an element and attaches it to said element as a javascript object.

Public
Anyone can see this repository. You choose who can commit.

Private
You choose who can see and commit to this repository.

Initialize this repository with a README

This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.

Add .gitignore: **None** ▾

Add a license: **MIT License** ▾

Create repository

Publishing to NPM

1. \$ npm adduser
 - a. username, password, and email address
2. \$ npm init
 - a. Use keywords “jquery-plugin” and “ecosystem:jquery”
3. \$ npm publish
